

PAPER GUIDELINE

PAPER RECOMMENDATIONS

Two paper families have been specified for PALFINGERS's print media.

Business stationery is printed on Munken Kristall uncoated paper.

All other printed materials for corporate communication should be printed on Arctic Volume Ice coated paper (both via the distributor Berberich).

Both papers are characterized by a high degree of whiteness, excellent image reproduction, a premium feel, and environmentally friendly production.

Note

A water-based dispersion varnish must be used to protect the print products.

*All information regarding digital printing processes is provided as recommendations and is expressly not guaranteed. Please observe the requirements of the digital printing machine manufacturers and their specifications regarding the use and suitability of printing materials.

MUNKEN KRISTALL

- high white, uncoated, wood-free
- smooth surface, natural feel
